

## N~CODER BENEFITS

- Improves Data Quality
- Increases Productivity
- Provides Data Consistency
- Eliminates Rework
- Assists with accurate RIW™ assignments
- Promotes coding efficiencies and reduces coder burden
- Valuable in a Regional Health Authority framework

The MED2020 N~Coder was designed to maximize productivity through efficient coding practices while ensuring data quality. Embedding the Folio™ tables inside the software eliminates the need for toggling or copy and paste between the abstract and Folio™ to locate and validate required codes. Knowledge-based technology provides the power of direct search methodologies versus arduous decision tree search formats.

## Features

- Embedded Folio™ tables allow the coder to see all the relevant information such as 'includes', 'excludes', 'dagger', 'asterisk', 'Code Also' and 'Omit' on the main grid.
- Providers who perform routine procedures can have a code pick list assigned to their name. Searching by the Provider's name will display only those codes relevant to his/her specialty
- Edit checks ensure that the user is made aware of any coding conflicts during the N~Coder search and selection routines, thereby improving data quality and eliminating the need for re-coding after populating the abstract
- Intervention attributes and diagnosis types are simultaneously assigned with the N~Coder to expedite coding
- The cross-reference table enables the user to create customized search methodologies suited to their specific search style. Acronyms or key words for long descriptions such as COPD (Chronic Obstructive Pulmonary Disease) can be created to expedite searches
- Available as a stand-alone system for use with other abstracting software or integrated in the WinRecs Suite of modules
- User-defined notes can be added and searched to allow greater flexibility for hospital defined coding practices, thus providing efficiency and consistency amongst coders

## MED2020 SOLUTIONS

- Acute Care
- Ambulatory Care
- Complex Continuing Care
- Long Term Care
- Rehabilitation
- Mental Health
- Cancer Care

### WinRecs

- **Submissions by Care Type**
  - \* Data Entry & Validation
  - \* Associated Grouper Methodologies
- **Interfaces**
  - \* Batch
  - \* HL7
- **Chart Maintenance**
  - \* Chart Locator
  - \* Chart Deficiency
  - \* Release of Information
- **MED2020 N-Coder**
  - \* Knowledge-based encoding tool for selection of ICD10-CA and CCI codes
  - \* Coding Standards

MED2020 Health Care Software Inc. is a Canadian company that provides a comprehensive suite of Health Information Management (HIM) solutions to healthcare organizations across the continuum of care. Nearly half of all Canadian hospitals use MED2020 software to prepare and submit patient visit related data to provincial ministries of health and to CIHI.

First introduced to the Canadian market in 1996, MED2020's flagship product, WinRecs, has evolved into one of the most comprehensive HIM solutions on the market. This modular product is designed to be easily configured in various ways to meet specific client requirements.

## About MED2020 Health Care Software Inc.

MED2020's staff includes CHIM certified Health Information Management Professionals, most of whom provide direct client support. These services are delivered from our Head Office in Ottawa as well as in our regional office located in Brandon, Manitoba.

MED2020 has earned a reputation for developing solutions that address the real-world needs of Canadian HIM professionals. We are committed to developing products that both meet the functional needs of our clients and that operate reliably each and every day. Let us show you how we can address your health information management needs and demonstrate why we are the HIM vendor of choice for Canadian healthcare organizations.

MED2020's growing suite of products includes solutions to address:

- **Document Management**
- **Patient Flow**
- **Business Intelligence**
- **Decision Support**
- **Privacy**
