

HISTORICAL DATA IMPORT UTILITY

HDIU BENEFITS

- up to 5 years historical data - per institution - automatically aligned
With your existing abstracting application
- Most recent grouping methodologies applied for current Benchmarking
- Crystal Reports™ allow for trend report creation by criteria such as:
 - * Provider Number of Service
 - * MCC/CMG™
 - * Patient Service
 - * Age Category
 - * Gender
 - * Postal Area
 - * Residence Code
 - * Admit Category
 - * Diagnosis
 - * Intervention
- Avoid complex XLS spreadsheets and formulae
- Use existing tools and software

The Historical Data Import Utility 2011 will import historical files provided by CIHI (already regrouped with the 2010 methodologies) directly into WinRecs and align the records from your CIHI files with the ones already stored in your database.

Once the data is loaded into your WinRecs system, virtually every historical record with an existing record in WinRecs will be linked. You will be able to achieve complete comparative historical reporting for all DAD and NACRS groupers and your standard Crystal Reports™ in use today can even be utilized with these record sets.

"The Historical Data Import Utility (HDIU) is very important for us as we use this utility for both internal and external reporting. Without this utility to import certain data, we would not be able to verify our data nor look at historical data trends within our WinRecs abstracting system; we would need to utilize a Data Warehouse."

- Navin Goocool, CHIM, Manager, Coding and Statistics, Sunnybrook Health Sciences Centre

In order to import the latest regrouped historical data from CIHI, it is necessary to use the most recent version of the utility as current files issued by CIHI are unable to be imported into previous versions.

This version of the product will be made available to all existing MED2020 clients for a small annual fee regardless of whether or not previous versions of the utility were purchased.

Please contact our Sales Department at **1-800-461-2020** or email **sales@med2020.ca** for more information, including other groupers available:

CMG™ - Case Mix Grouper

MED2020 Health Care Software Inc. is a Canadian company that provides a comprehensive suite of Health Information Management (HIM) solutions to healthcare organizations across the continuum of care. Nearly half of all Canadian hospitals use MED2020 software to prepare and submit patient visit related data to provincial ministries of health and to CIHI.

First introduced to the Canadian market in 1996, MED2020's flagship product, WinRecs, has evolved into one of the most comprehensive HIM solutions on the market. This modular product is designed to be easily configured in various ways to meet specific client requirements.

About MED2020 Health Care Software Inc.

MED2020's staff includes CHIM certified Health Information Management Professionals, most of whom provide direct client support. These services are delivered from our Head Office in Ottawa as well as in our regional offices located in Manitoba and British Columbia.

MED2020 has earned a reputation for developing solutions that address the real-world needs of the Canadian health care industry. We are committed to developing products that both meet the functional needs of our clients and that operate reliably each and every day. Let us show you how we can address your health information management needs and demonstrate why we are the HIM vendor of choice for Canadian healthcare organizations.

MED2020's growing suite of products includes solutions to address:

- **Coding and Abstracting**
- **Document Management**
- **Patient Flow**
- **Business Intelligence**
- **Decision Support**
- **Privacy**
